

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

NOTES OF CASES.

Peruna Held an Alcoholic Beverage.—A firm of retail druggists doing business in Syracuse, N. Y., was recently held liable for a penalty for illegal sale of liquor by disposing of several bottles of Peruna. Analysis showed almost 27 per cent. alcohol, the effect of which was not neutralized by the few other ingredients. The question of good faith of defendants in believing the mixture to be a medicine was held by the New York Supreme Court to be immaterial. The case is reported under title *Clement v. Dwight*, 121 New York Supplement, 788.

Admissibility of Readings of Photo Speed-Recorders.—The speed of an automobile moving faster than the winds may now be measured by a photo speed-recorder, and the violator of municipal speed ordinances may have his rate calculated to a mathematical certainty and used in evidence against him. The method is to take two pictures of a moving object from behind, one picture about a second later than the other. The object having moved through a certain distance during the interval, the second photograph will be smaller than the first, and by measuring the difference in the size of the two photographs the distance the object has traveled during such period may be determined by the photographic rule that the distance of any object from the lens of the camera is as many times greater than the distance of the photograph from the lens as the length of any line of the real object is greater than its length on the photograph. The admission in evidence of the results of experiments with one of these photographic speed recorders, the *Massachusetts Supreme Judicial Court* holds in *Commonwealth v. Buxton*, 91 *Northeastern Reporter*, 128, was not error, as such results did not depend on the fluctuations of human agencies, but on the workings of natural laws, and it was desirable to have some machine whose action, being dependent on the uniform working of the laws of nature, would accurately record the speed of a moving object.

Photographs of Persons Accused of Crime.—The use of photographs of persons accused of crime is discussed in a short opinion by the Supreme Court of Arkansas in *Mabry v. Kettering*, 122 *Southwestern Reporter*, 115. It was alleged by complainant that pictures were taken for the avowed purpose of placing them in the "Rogues Gallery." The court refuses to take judicial notice as to what such a gallery consists of, or what are its objects, and says that, "for aught we know to the contrary, it may be some legitimate method of identification of criminals or those charged with crime." The main prayer in the complaint was that injunction issue to restrain
